

# AlertNet: Man-down / Lone-worker Monitor

for two-way radio & GSM alarm devices

The **AlertNet** all-in-one lone-worker / man-down system provides an automated response to personal alarms. Including man-down, panic or threat. It is ideally suited to highly automated facilities with reduced man-power, remote installations or hazardous operations.

Alarms received are displayed with the originators identity and alarm type. The (optional) **emergency team** call-out facility will notify responders, by text message via pagers, cell-phone or radio, both on or off site.

The system includes an **emergency-stop** facility for critical plant equipment, Also a gate / barrier over-ride to allow emergency access. The solution can be customised to work with existing site radio and paging or be part of a complete emergency response solution.

### Features & Options

- 1 = Displays Alarm / User Information
- 2 = Includes an Escalating Response
- 3 = Radio / Pager Link with Responders
- 4 = GSM SMS Alarm Texts
- 5 = Alarm Response Communications Hub

### Supported Systems & Functions

- A = Two-way Radio - Conventional & Digital
- B = GSM Lone-worker / Man-down devices
- C = Emergency Stop for Plant & Machinery
- D = Controlled Access
- E = Remote Sounders / Voice announcements
- F = Complete Radio / Paging Solutions
